

Disaster Recovery as a Service (DRaaS)

Powered by **iland**

Viadex MSP specialise in supporting mid-market organisations to grow globally, at speed, safely.

Would you like to improve operational efficiency whilst decreasing the burden?

The reliance on IT systems means Disaster Recovery Systems are an integral part of the IT infrastructure. DR is critical yet it is another demand on IT teams that is preventing their focus on the longer term strategy & more meaningful outcomes for the business.

Overwhelmingly, IT Teams in global organisations are under resourced and overburdened, trying to keep services running around the globe and around the clock.*

Mid-market businesses want the IT teams to focus on business innovation and helping them differentiate as part of transformation programmes.

Viadex DRaaS ensures IT systems are always on and available, globally. Working with an experienced global partner frees up your people to focus on the business while ensuring you are protected from exceptional events, hardware failures, software errors, malicious software, users and accidents.

Viadex deliver a fully managed service globally for security, compliance & performance delivered through an operational commercial model.

Using Viadex cloud based global services increases operational efficiency by removing complexity and cost whilst being SLA backed.

Put expert arms around it.

Why Viadex DRaaS is a fit for your organisation:

- Disaster Recovery is a key requirement for any organisation that relies on IT systems
- DRaaS frees IT teams up from managing and supporting this infrastructure
- Working with an experienced service provider ensures service level is met
- All inclusive support
- Advanced security and compliance
- DR testing included
- Global locations for performance, security and compliance

Viadex support your growth

Viadex are a global MSP. Our services are designed for global organisations who want to free themselves from managing and supporting IT infrastructure to focus on their business. We work in partnership with IT teams who do not have the resources to migrate, deploy & manage themselves in public cloud & businesses who want a technology partner to help them align and exploit their IT strategy for better outcomes.
